arsentabaku2@gmail.com

Dear Sir or Madam,

With over six years of experience designing and developing scalable, user-focused apps, I bring strong technical expertise combined with a pragmatic, product-oriented mindset. Currently, I work as a Senior Frontend Engineer at SuprNation where I focus on building high-quality frontend systems and delivering reliable, user-centric digital experiences.

My journey has taken me from developing interactive VR environments during academic research to shaping robust frontend architectures in fast-paced environments across Germany, the US, and Malta. At VRdirect, I contributed to full-stack solutions for immersive platforms. At Curb Hero, I improved platform reliability by establishing a strong QA foundation. At ada GmbH, I worked as a Frontend Lead, contributing to key product initiatives, promoting best practices, and aligning frontend development with business goals. At SuprNation, I build scalable frontend solutions using reactive and functional programming principles.

I am passionate about clean architecture, scalable frontend design, and high development standards. My core stack includes Angular, TypeScript, and RxJS, with a strong focus on reactive and functional programming. I also have experience with GraphQL, UI/UX collaboration, and testing frameworks such as Cypress and Jest, enabling me to deliver maintainable and high-performing applications.

I thrive in environments that value ownership, collaboration, and continuous improvement. I am motivated by solving real-world problems through scalable and efficient solutions, and I am excited to contribute to a team that prioritizes both technical excellence and product impact.

You can find more about me and my work here: <https://arsentabaku.github.io>.

Thank you for your time and consideration. I look forward to connecting.

Warm regards,

Arsen Tabaku
